EDUCATION

University of Illinois at Urbana-Champaign | Champaign, Illinois **August 2024 – May 2027**

B.S. in Information Science + Data Science | GPA: 3.9/4.0

SKILLS

Languages: Python, SQL, HTML, CSS, JavaScript, C++, R

Tools: Excel, Power BI, Tableau, GitHub, Jupyter Notebook, MySQL, Unreal Engine 5, Visual Studio, Figma, PowerPoint

Libraries: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Plotly, SciPy, XGBoost, Statsmodels, PyTorch

EXPERIENCE

SpaceTid | Shanghai, China **June 2025 - Aug 2025**

Web Development Intern

- Contributed to front-end website development using HTML, CSS, and JavaScript to design and build pages
- Learned data center structures and systems using CAD tools while also learning about business operations

PROJECTS

Retail Sales Analytics Dashboard | Power BI, Power Query, DAX **October 2026 – November 2026**

- Cleaned and transformed retail transaction data using Power Query; established relationships between sales, product, and date tables to support consistent reporting
- Developed an interactive dashboard with DAX measures for revenue, order volume, and average order value; enabled comparisons across time periods and product categories through slicers and drill-downs.

Books Data Analysis | Python, Pandas, Matplotlib, Seaborn, Plotly **August 2026**

- Cleaned and transformed book metadata and created 24 visualizations exploring different variables.
- Used correlation heatmaps, density plots, and interactive charts to communicate patterns, with written interpretations addressing sampling limitations and potential bias.

Employee Records Analysis | SQL **June 2026 – July 2026**

- Joined employee, department, and salary tables to create analysis-ready datasets. Checked for missing values, duplicate records, and unmatched employee IDs.
- Used CTEs, aggregate functions, and window functions to analyze departmental compensation, rank salaries within departments, and identify employees earning above departmental averages.

Gene Expression Classification | Python, Pandas, Scikit-learn, Matplotlib **May 2026**

- Built a 700-tree Random Forest pipeline with median imputation to classify five cancer types using thousands of RNA-Seq gene expression measurements.
- Achieved **100%** accuracy on a stratified held-out test set; evaluated precision, recall, and a confusion matrix while documenting limitations of the controlled dataset.

Housing Price Prediction | Python, Pandas, Scikit-learn, Matplotlib **April 2026**

- Developed a histogram-based gradient boosting regression pipeline with missing-value imputation and categorical encoding to predict housing sale prices.
- Achieved an **8.54%** mean absolute percentage error, with **93.39%** of test predictions within 20% of actual prices; examined predicted versus actual values.

Customer Churn Prediction | SQL, Python, Pandas, Scikit-learn **March 2026 – April 2026**

- Cleaned and joined customer account, service usage, and billing data using SQL; engineered features capturing tenure, usage patterns, and payment behavior
- Compared logistic regression and gradient boosting using precision-recall AUC, precision, and recall; evaluated decision thresholds to identify customers at risk of leaving within a fixed outreach capacity.

Spellbound | Unreal Engine 5, C++, Blueprints **September 2026 - Present**

- Developing a single-player platformer with planned exploration, environmental puzzles, and sword-and-magic combat.
- Implemented basic player movement, gameplay mechanics, UI, and HUD.

Personal Portfolio | HTML, CSS, JavaScript, GitHub, Cloudflare **June 2026 - Present**

- Designed and built a multi-page portfolio showcasing technical projects, skills, education, and experience.
- Used GitHub for version control and hosted the website on Cloudflare.
